Personal Statement

As a Lead Front-end Developer, I utilise over a decade of industry experience crafting custom web solutions. I take pride in engineering for high-traffic, global websites using high-quality, accessible, and performant code. In addition, I champion a Test-Driven Development approach through Pair Programming to ensure robust and reliable outcomes.

Key Skills

- Over 10 years of web development experience
- Over 4 years of tech leadership experience
- Over 4 years of Next.js experience
- Over 8 years of working in an agile methodology
- 5 years of React experience
- Over 3 years of Angular experience

Work History

Ensono Digital

November 2022 - March 2024

Senior Frontend Consultant

Technologies: Typescript, Node, React, Next.js, AWS, Azure, PostgreSQL

Spearheaded an award-winning custom SSR e-commerce solution for a large gym company and guided a front-end team to create a custom SSR admin application which was part of a multi-team banking project. Both projects focused on A11y using AXE and Cypress whilst maintaining high-quality code via Jest with Testing Library.

Part of the Open-source project team that created a scaffold CLI system using NX which would become the template for all future front-end projects and this project resulted in the time to initial MVP being reduced by half.

An overwhelming majority appointed me to be the Front-end competency Chair for all department meetings which included creating and orchestrating ceremonies for the department. Furthermore, I was the Line manager to multiple Front-end Engineers aiding them in progressing through the company whilst giving interpersonal and technological advice.

Cinch

April 2021 - November 2022

Senior Software Engineer

Technologies: Typescript, Node, React, Next.js, Redux, AWS, DynamoDB

Tailoring existing features on the website following TDD and AAA A11Y practices via the use of React and Typescript linked with an AWS micro-service architecture backend. Code was deployed

using GitHub Actions' CI/CD pipeline. Releases were often small iterative UI changes via A/B testing to enable a data-driven approach to determine successful changes.

When creating features for the website, it emphasised using O11y to create an excellent customer experience when releasing. Kanban and pair programming were used to deliver features and release often whilst adhering to the high quality of coding standards using Testing Library and Cypress so the 1 million visited a week website is robust.

Outside my daily functions as a full-stack developer on the team I was a major contributor to the mentorship program by mentoring junior developers on the many squads, I was part of. Lastly, I organised working groups for the technical department and kata meetings for fellow engineers.

Mercato

May 2020 - April 2021

Senior Frontend Engineer

Technologies: Typescript, GO, Node, React, Next.js, React Native, Nest.js, GCP, MySQL, MongoDB

- Created an e-commerce platform to enable store creators a no-code approach when creating a virtual store. Microservices were written in GO to add bespoke e-commerce features
- Tailored a robust admin UI using React and TanStack to develop new features in a BDD approach via Testing Library and Jest

Bet365

Jul 2019 - May 2020

Software Developer

Technologies: Typescript, React, GO, MS SQL, Riak

- Maintained the Bet365 Sports website and app using a custom Typescript framework and a custom Visual Testing library
- Created custom offers across all sports on the website via a Jenkins release that can be seen all over the world in 20 different languages

Codeweavers

Sept 2016 - Jul 2019

Frontend Developer

Technologies: Typescript, C#, Angular (2+), RXJS, NGRX, PostgreSQL

- Created bespoke vehicle journeys using Angular to interact with a C# API. This was stored via NGRX and tested via Jest
- Extreme Programming principles which include practices such as TDD to enable frequent high-quality commits and a single trunk CI/CD environment

Community and Certifications

- Node.js Application Developer Certification
- A regular speaker at technology meetups in Stoke-on-Trent and Manchester
- A 5-star Top Mentor on MentorCruise - a mentorship platform

Hobbies and Activities

- Former Semi-Professional Dota2 Player and World record speedrunner
- Award-winning hockey player for North Stafford Hockey Club, previously captain of the 2nd team
